HAW HAMBURG

TI Department Informations- und Elektrotechnik

Laboratories on the 8th floor

SAFETY TRAINING

Access authorisation and rules
Only instructed persons associated with the university shall have access to the laboratory's training or study workspaces. The *Basic Regulations for the Operation and Use of Laboratories and Workshops at the Hamburg University of Applied Sciences* shall be observed. Compliance is mandatory for all laboratory users.
Accidents shall be immediately reported to the relevant professor or laboratory employee.

EMERGENCY STOP facilities
A red emergency stop switch is available at each laboratory station. Activating this switch shuts off the mains power for all of the workplaces in the laboratory. In case of danger, this switch shall be immediately activated.

Live-line working
Live-line working is strictly prohibited for AC voltages > 25 V and DC voltages > 60 V. Any direct usage of the 230 V mains voltage in the measurement circuit is prohibited! Furthermore, only the appropriate device connectors may be plugged into the earthed sockets.

Handling of devices and equipment
All devices and equipment shall be handled with proper care. Defective devices, cables and components shall no longer be used. They shall be immediately reported to the relevant employees and must not be put back into service under any circumstances.
It is prohibited to touch the computer screens.
Eating and drinking are not allowed in the laboratory.

Fire extinguishers and fire alarms
Fire extinguishers are provided in the laboratories next to the doors. The fire extinguishers are also suitable for electrical equipment. Caution: there is a risk of suffocation when extinguishing with CO_2. Fire alarms are located on each floor in every stairway. Always use the closest alarm to the fire that can be reached – this helps the fire brigade to localise the fire on the central indicator panel.
In case of an alarm, always observe the loudspeaker announcements!

Escape routes and behaviour in case of an alarm
In case of an alarm, quickly exit the building via the stairways and move away from the area in front of the building. Gather in the parking area behind the building, but do not block access to the building for emergency vehicles.
Persons with reduced mobility who are unable to use the stairways shall be brought to the lift hallway (protected space). This shall be reported to the person responsible for the floor (yellow waistcoat) so the fire brigade can bring the person to safety.

Emergency telephone
Emergency number for emergency telephone in laboratory: 0-112.
An additional emergency telephone is located on the ground floor in the first aid room (room no. 011). Emergency numbers are available on the telephone.

First aid
A first aid kit can be found in the hallway of the lifts as well as in the first aid room on the ground floor (room no. 011). In addition, a stretcher and trolley are located in room 011.
The first aider are: Andrea Kupke, room 08.04a and André Hülsen, room 08.84.
A defibrillator is located on the ground floor, too.

Statement of agreement
By signing this document, you agree to comply with these safety rules as well as the *Basic Regulations for the Operation and Use of Laboratories and Workshops at the Hamburg University of Applied Sciences*. If these rules and regulations are violated, further usage of the laboratories and workshops may be prohibited.
